## Question 62

Let X be a random variable with the probability density function f(x) such that

$$f(x) = \begin{cases} \frac{1}{2\sqrt{3}}, & -\sqrt{3} \le x \le \sqrt{3} \\ 0, & \text{otherwise} \end{cases}$$
 (1)

Then the variance of X is? (GATE XH-C1 2023) **Solution:** 

The mean of X

$$\mu_X = \int_{-\infty}^{\infty} x f(x) dx \tag{2}$$

As the integrand is odd

$$\implies \mu_X = 0$$
 (3)

The variance of X is:

$$\sigma_X^2 = \mathbb{E}\left((X - \mu_X)^2\right) \tag{4}$$

From (3)

$$\implies \sigma_X^2 = \mathbb{E}\left(X^2\right) \tag{5}$$

$$= \frac{1}{2\sqrt{3}} \int_{-\sqrt{3}}^{\sqrt{3}} x^2 dx \tag{6}$$

$$=1 \tag{7}$$
