Question 62
Let X be a random variable with the probability density function $f(x)$ such that

$$p_X(x) = \begin{cases} \frac{1}{2\sqrt{3}}, & -\sqrt{3} \le x \le \sqrt{3} \\ 0, & \text{otherwise} \end{cases} \quad (1)$$

Then the valaue of X is?
Solution:
The mean of X

$$\mu_X = \int_{\infty}^{-\infty} x f(x) dx \quad (2)$$

$$= \frac{1}{2\sqrt{3}} \int_{-\sqrt{3}}^{\sqrt{3}} x dx \quad (3)$$

$$= 0 \quad (4)$$

The variance of X is:

$$\sigma_X^2 = \int_{\infty}^{-\infty} (x - \mu_X)^2 f(x) dx \quad (5)$$

From (4)

$$\sigma_X^2 = \frac{1}{2\sqrt{3}} \int_{-\sqrt{3}}^{\sqrt{3}} x^2 dx \quad (6)$$

$$= \frac{1}{2\sqrt{3}} \left(\frac{6\sqrt{3}}{3} \right) \quad (7)$$

$$= 1 \quad (8)$$
